## **XML FORMAT FOR RESULTS - DESCRIPTION AND EXPLANATIONS**

### **1. Introduction**

Further to the recent update of our IT system, it is now possible to send the FEI the results directly in XML format. This procedure will hopefully simplify and speed up procedures for the OCS, NFS and FEI and will furthermore allow the results to be processed more efficiently to the benefit of all involved.

Please find below the description, information and explanations of the Xml files required in order to correctly and swiftly upload them into FEI Family.

You will also find an example of XML file attached:

- Normal\_Competition.xml
- Team\_Competition.xml
- Olympic\_Games.xml

### **2. Header**

It starts with a standard XML header and the first element: **Eventing**

```
<?xml version="1.0" encoding="UTF-8" standalone="yes" ?>
- <ns1:Eventing xmlns:ns1="http://www.fei.org/Result">
```

### **3. Compet, Indiv & Team**

The Competition element is then included in the **Eventing** one.

Under the **Compet** element, there are 2 lists:

- The **Indiv** elements

This information must be completed for each combination (Athlete/Rider) that participated in the competition (plus the information associated to them).

## 4. Detail of <ns1 :Indiv>

The **Indiv** element contains a set of elements in regard to the combination (Athlete/Horse) information (IDs and Names) as well as their results.

```
<?xml version="1.0" encoding="UTF-8" standalone="yes" ?>
- <ns1:Eventing xmlns:ns1="http://www.fei.org/Result">
